Problem-Solution fit canvas 2.0

Purpose / Vision: Automate standard laptop orders with Flow Designer so employees get approved laptops faster, with less manual work.

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS - Employees (new joiners and existing staff) who need a standard laptop - Managers who approve laptop requests - IT procurement / asset team who place and track orders - IT admins who maintain the ServiceNow catalog and flows	6. CUSTOMER CONSTRAINTS CC - Only approved standard laptop models within budget - Manager approval is mandatory before ordering - Delivery depends on vendor lead time - Small IT team with limited time for manual follow-up - Solution must work inside the existing ServiceNow instance	5. AVAILABLE SOLUTIONS AS - Email / phone requests to the IT desk - Generic tickets and manual purchase orders - Spreadsheets to track orders and stock - Pros: familiar, no set-up needed - Cons: slow, error-prone, no visibility, requests get lost	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P - Request a standard laptop quickly through one form - Get manager approval without chasing people - Raise the order and track delivery with less rework - Know the request status at any time - Record and assign the laptop as an asset	9. PROBLEM ROOT CAUSE RC - Laptop ordering runs on manual, disconnected steps (email, spreadsheets, re-typed orders) - There is no standard catalog item or automated workflow linking request, approval, order and asset record - This causes delays, errors and no tracking	7. BEHAVIOUR BE - Employees email IT or raise generic tickets and follow up repeatedly - Managers approve by email or verbally - Procurement re-enters details into purchase orders by hand - IT tracks requests and stock in spreadsheets	
Identify strong TR & EM	3. TRIGGERS TR - New employee onboarding - Laptop failure or end-of-life refresh - Role change; push for cost control and automation	10. YOUR SOLUTION SL - A Standard Laptop catalog item in the ServiceNow Service Portal - A Flow Designer flow starts on request submission - Manager approval, then inventory / asset check - Procurement task or purchase requisition created for approved requests - Asset record created and assigned on delivery - Email updates at every stage plus dashboards for tracking - Result: faster, error-free and transparent laptop ordering	8.1 ONLINE (8. CHANNELS of BEHAVIOUR) CH - Browse the catalog and submit the request in the Service Portal - Approve from the email link; track request status online	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER EM - Before: frustrated, uncertain about status, work delayed - After: confident, in control, trusting of IT service		8.2 OFFLINE - Ask the IT desk or colleagues in person or by phone - Talk to the manager; collect the laptop at the IT desk
