

Project Design Phase
Proposed Solution Template

Date	28 September 2026
Team ID	SWTID-2026-1668
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders With Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Employees requesting a standard laptop today raise requests that are handled manually through emails, phone calls and spreadsheets. Approvals get delayed, requests are lost or duplicated, order status is unclear, and IT staff spend time on repetitive follow-ups. This slows onboarding and makes procurement inconsistent and hard to track.
2.	Idea / Solution description	Automate the standard laptop request using ServiceNow Flow Designer. The employee submits a catalog item request, and a flow takes over from there. The flow routes the request to the manager for approval, creates a procurement task for the IT team once approved, updates the requester at each stage, and closes the request when the laptop is delivered. Rejected requests are closed with a notification to the requester.
3.	Novelty / Uniqueness	A low-code, end-to-end workflow built with Flow Designer, with no custom scripting needed. Approval, task creation, notifications and closure are all handled in one flow, and the logic can be changed visually by an administrator as company policy changes.
4.	Social Impact / Customer Satisfaction	Employees get faster laptop delivery, clear status updates and a simple self-service experience. IT and managers are freed from repetitive manual work and can focus on higher-value tasks. Standardised orders also reduce errors and improve transparency.
5.	Business Model (Revenue Model)	An internal efficiency model: the value comes from cost and time savings rather than direct sales. Savings come from reduced manual effort, fewer procurement errors, faster onboarding of new hires and better control over standard

		hardware spending. The solution can also be offered as a reusable workflow package or service to other organisations.
6.	Scalability of the Solution	The same flow can be reused for other standard requests such as desktops, monitors, mobile phones and software licences by changing the catalog item and approval rules. It runs on the ServiceNow platform, so it can handle growing request volumes and be extended to more departments, locations and integrations (for example, vendor ordering or asset management).
