| Project Name  | Streamlining IT Procurement: Automating Standard Laptop Orders With Flow Designer |
| Maximum Marks | 4 Marks                                                                           |

### Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

### Solution Architecture Diagram:

ServiceNow Platform: Service Catalog | Flow Designer | Approval Engine | Task Management | Email Notifications

Figure 1: Architecture and data flow of the automated standard laptop ordering solution using ServiceNow Flow Designer

1. Employee raises a request for a standard laptop.
2. The Service Catalog item captures the request and creates a request (RITM) record.
3. The Flow Designer flow is triggered when the request is submitted.
4. The flow sends an approval request to the employee's manager.
5. Decision: if approved, the flow continues; if rejected, the request is closed and the employee is notified.
6. A catalog task is created and assigned to the IT procurement team.
7. IT orders the standard laptop and completes the task once it is delivered.
8. The flow notifies the employee and closes the request.
