

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	28 September 2026
Team ID	SWTID-2026-1668
Team Leader	KARTHIKA R
Team Members	BRINDHA S, JANANI P, KANIMOZHI P, PARAMESHWARI V
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders With Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Authentication & Role Access	Login through corporate credentials / Single Sign-On (SSO) Role-based access for Employee, Manager, Procurement Team and IT Administrator
FR-2	Standard Laptop Request Submission	Request through Service Catalog form (laptop model, business justification, needed-by date, cost centre) Auto-population of requester details (name, department, location, manager) Mandatory-field validation before submission
FR-3	Approval Workflow	Automatic routing of request to the requester's manager via Flow Designer Approve / Reject action through email or portal Reminder and escalation when approval is pending beyond the set time
FR-4	Automated Procurement & Fulfilment	Auto-creation of catalog tasks / purchase requisition for approved requests Inventory check and assignment of stock laptop before placing a new order Asset record creation and assignment to the requester on delivery
FR-5	User Confirmation & Notifications	Confirmation via Email on request submission Status update notifications on approval, rejection, order placement and delivery
FR-6	Request Tracking	Real-time request status tracking through the portal Request history with approval and fulfilment audit trail
FR-7	Reporting & Monitoring	Dashboard for request volume, approval turnaround time and fulfilment time Exportable reports for procurement and audit teams

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Simple, guided catalog form with pre-filled fields and clear status messages so employees can raise a laptop request in a few minutes without training; accessible on desktop and mobile browsers.
NFR-2	Security	Role-based access control, SSO authentication, encrypted data in transit and at rest, and a full audit log of approvals and fulfilment actions; only authorised users can approve or modify requests.
NFR-3	Reliability	Flow Designer flows run consistently with error handling and retry, so no approved request is lost or duplicated; failed flow executions raise alerts to administrators.
NFR-4	Performance	Request submission and approval routing complete within a few seconds; notifications are sent promptly and catalog pages load within 3 seconds under normal load.
NFR-5	Availability	The procurement workflow is available 24x7 with at least 99.5% uptime, relying on the ServiceNow platform's availability; maintenance is scheduled outside business hours.
NFR-6	Scalability	Flows and catalog items are reusable, so additional standard hardware (monitors, phones, accessories), new departments and higher request volumes can be added without redesign.
